## pressure test results

- ▶ As of September 23, we have passed 47 of 50 PMTs.
- ▶ 11 PMTs were tested during the past week (September 16 - September 22). PMT 8870 had a hole in the cable jacket. It was fixed and tested again.

Table 1: pressure test result: For PASS/FAIL reasons, please see the table in the next slide.

## PASS/FAIL reasons

number	reason
1	Cable dry. No leaks or cracks.
2	1+Some water penetrated the mastic tape seal of the cable strain relief plug, but did not penetrate the UW cable plug.
3	Moisture on the SHV end in the sealing tube. Conductivity test performed.
4	Acrylic cap contains much water.(see photo)
5	A big crack and a little hole in the PMT. Photocathode was gone.(see photo)
